Breast Augmentation

What is Breast Augmentation?

Breast Augmentation is the medical term given to increase the breast size.

Breast Augmentation Candidates

The candidacy of a patient who wants to undergo a breast augmentation surgery must first be determined by a qualified plastic surgeon

The best candidates are:

- Healthy women of any age are ideal candidates.
- Those who have realistic expectations
- Those whose breasts are fully developed
- Those who are bothered by the feeling that your breasts are too small
- Those who are dissatisfied with your breasts losing shape and volume after pregnancy, weight loss or with aging
- Those whose breasts are asymmetrical

Before Surgery

In preparing for breast augmentation, patients will need to undergo some health tests to ensure they are fit for the surgery. The following recommendations may be made:

- To get a blood test
- To take certain medications or adjust your current medications
- To stop smoking
- To avoid taking aspirin and certain anti-inflammatory drugs as they can increase bleeding

Before

After

1 to 4
HOUR

During Surgery

Patients may receive a general anaesthetic before the surgical procedure, which can last for 1 to 4 hours. Incisions are made in folded areas to minimize visible scarring. You and your plastic surgeon would discuss which incision options are appropriate for your desired outcome.

6 to 8
WEEKS

Post surgery

After the surgery, your breasts will be wrapped in elastic bandage or support bra to minimize swelling and support the breasts as they heal. Antibiotics and pain killers are also given. Follow - up appointments if required for suture removal will be scheduled. There may be slight bruising and numbness in the particular area which will reduce in 6-8 weeks.

Results

The results for this surgery will help in satisfying those women who wish to enhance, regain or restore balance to their figures.
