BREAST LIFT

What is Breast Lift?

- A Breast lift surgery is done for saggy and uneven breasts and decreased breast volume that has droopy nipples and stretched areola.
- The breast lift procedure is commonly known as mastopexy that usually includes repositioning the nipples on the higher chest wall. This procedure can be undergone at any age after the breasts have fully developed.
- Women might need to undergo such a procedure because with age the body undergoes several changes like pregnancy, breastfeeding, weight fluctuations, aging, heredity, etc

What are the results of this surgery?

- Undergoing a breast lift surgery will restore the youthfulness and enhances appearance of the candidate by giving a fuller breast.
- Women might need to undergo such a procedure because with age the body undergoes several changes like pregnancy, breastfeeding, weight fluctuations, aging, heredity, etc

What is Tummy Tuck?

- Tummy tuck surgery, also known as abdominoplasty, is a cosmetic procedure used to remove the excess fat and skin and, in most cases, rebuild weakened or separated muscles creating an abdominal profile that is smoother and firmer.

What are the different types of this surgery?

There are three types of Tummy Tuck procedures that are done:

a) Full Tummy Tuck

This is done to patients with excessive skin and weak abdominal muscles

b) Mini Tummy Tuck:

This targets the area below the patient's navel.

What are the results of this surgery?

- It makes the abdomen thinner and firmer.
